SUMMARY

Software Engineer with 4+ years of experience and an M.S. in Computer Science from Purdue University. Hands-on experience building production systems with Python, Java, Groovy, Spring, Node.js deployed on Azure and AWS. Delivered full-stack features across REST, GraphQL and SOAP architectures with a focus on performance, scalability, clean code, automation and integrating AI, LLM-powered features.

EDUCATION

Purdue University USA — Master of Science in Computer Science (M.S)	Aug 2023 - May 2025
Pune University India — Bachelor of Engineering in Information Technology (B.E.)	Aug 2016 - May 2020

EXPERIENCE

One Community <i>Software Engineer</i>	USA Jun 2025 – Present
--	---------------------------

- Implemented a real-time analytics dashboard in React (Chart.js, Recharts, D3.js) with memoization and Redux-protected routes, reduced unnecessary re-renders by 70%.
- Built 50+ RESTful API endpoints in Node.js with multi-filter querying, server-side pagination, and MongoDB aggregation pipelines.
- Configured React Testing Library and Vitest tests for Redux components, using Claude and Gemini for async API mocking and DOM assertions.

Capgemini <i>Associate Consultant (Senior Backend Engineer)</i>	India Jan 2023 – Aug 2023
---	------------------------------

- Reduced DB round-trips and primary load by 70% via SQL stored procedures and foreign-key indexing.
- Collaborated with QA on test cases and peer code reviews; partnered with MetLife stakeholders to streamline Agile delivery across the full SDLC.
- Configured Azure DevOps pipelines to build Docker images, push to Azure Container Registry, and trigger deployments on merge.
- Extended a Spring Boot REST application to support legacy SOAP integrations via JAX-WS.

Senior Software Engineer	Jan 2022 – Dec 2022
---------------------------------	---------------------

- Designed Java Spring Boot REST APIs for financial services handling 1M+ daily requests, secured with JWT/OAuth, improved efficiency by 35%.
- Built Jenkins CI/CD pipelines with Maven, cutting release cycles from 2 hours to under 10 minutes.
- Built a customer-facing Angular/TypeScript application for account and policy details with lazy loading, reactive forms and NgRx state management.
- Implemented a Kafka event streaming pipeline to publish financial domain events (payments, balance updates, statements) to downstream services, decoupling core processing from reporting.

Software Engineer	Nov 2020 – Dec 2021
--------------------------	---------------------

- Automated ETL pipelines via Unix shell scripts to extract, clean, and load data into Oracle and MySQL.
- Resolved N+1 query issues in a high-traffic Java backend using JPA and native SQL.
- Configured distributed logging across 5 microservices using Log4J for per-function latency monitoring and observability.
- Built reusable TypeScript UI components (carousels, accordions, collapsible panels), reducing code duplication by 60% and accelerating feature delivery.

PROJECTS

TaskOps Spring Boot, Next.js, GraphQL, Apollo Federation, OAuth, PostgreSQL, RabbitMQ Github Link	May 2024
--	----------

- Built frontend interface using Next.js and Apollo Client to consume federated GraphQL APIs and manage client-side state.

Mastodon TutorAI Python, MongoDB, ChromaDB, LLaMA, OpenAI, Streamlit, Docker Github Link	Dec 2024
---	----------

- Built a GenAI-powered course assistant using RAG pipelines, leveraging OpenAI API, embeddings and vector search (ChromaDB) for context-aware responses.
